

Alan Endacott

The spoil heaps and the weighbridge.

So there would have been a little industrial gauge tramways bringing horse drawn wagons across from the quarry and just tipping over the side of the trucks to form these lines of waste material.

Near where we stand now there's the weighbridge for the limestone quarry as well, there's very little of it left, its just a small rectangular ruin but alongside it you can see the plate from the old weighbridge itself, or what's left of it, with the name Bartlett of Bristol who obviously cast the plate for the quarry owners.
